

Joel Fredriksson

Engaged developer with expertise in
frontend and backend.

WORK EXPERIENCE & PROJECTS

Warehouse worker – Oriola, Enköping mars 2014-

warehouse management and logistics in a safety-critical environment
in the pharmaceutical industry.

LIA – developer, Search Intent & Just Value, Stockholm jan 2024-maj 2024

During my LIA at Search Intent & Just Value, I worked with both development and customer support. I optimized website performance through JavaScript and implemented analytics solutions with Google Analytics and Tag Manager. significant part of the work involved WordPress development where I built websites and wrote PHP scripts to automate content management. also handled technical support with direct customer contact, where I solved problems in the database. My areas of responsibility also included handling domain changes and certificate updates in AWS. The work gave me valuable experience working in teams and handling both technical and customer-related challenges.

Own Projects

I have developed and published an app that helps users calculate average values for stock purchases. In parallel, I am developing an app for planning and reminders. Both projects are built with React Native, TypeScript and Firebase, with support from Expo for distribution. I have collaborated with a senior developer, which has been valuable for better understanding industry practices.
